Senior Software QA Engineer @ Brain Station 23 | Playwright | AI-
Driven Test Automation | ISTQB® Certified | 4+ Years
Dhaka, Bangladesh

Summary

I don't just test software, I build the quality infrastructure that lets engineering teams release with confidence. As a Senior Software QA Engineer (ISTQB® Certified) with 4+ years at Brain Station 23, I design and own end-to-end test strategies across web, mobile, API, and IoT platforms covering industries from logistics and oil & gas to digital services. My core strength is Playwright-based test automation. I build scalable, maintainable E2E frameworks with Page Object Models, data-driven test layers, and full CI/CD integration reducing regression cycles by up to 60% and enabling teams to ship faster without sacrificing quality. What sets me apart in 2025: I actively integrate AI into the QA lifecycle. I use AI for test case ideation and root cause analysis, GitHub Copilot for automation script generation, and MCP server integration with Azure Boards to automate defect tracking and sprint reporting — turning manual QA overhead into automated intelligence. Industries I've covered: → Logistics · Oil & Gas · IoT · E-commerce · Rideshare Beyond automation, I bring strong coverage across: → API & contract testing — Postman, Swagger, REST → Performance & load testing — k6, JMeter → Cloud & database testing — AWS DynamoDB, IoT Core, AppSync, SQS, SQL → Test management — Azure DevOps, Jira, TestRail I've mentored junior QA engineers, collaborated directly with international clients on UAT and release planning, and supported presales by demonstrating testing frameworks and automation maturity to prospective clients. I believe quality isn't a phase at the end of development, it's a culture built into every sprint, every commit, and every conversation with a client. Let's connect if you're building a quality-first engineering team.

Experience

Brain Station 23

4 years 10 months

Senior Software QA Engineer

January 2025 - Present (1 year 10 months)

Dhaka, Bangladesh

- Lead end-to-end QA strategy across 4+ concurrent international projects in logistics, oil & gas, IoT, e-commerce, and rideshare — defining test scope, risk coverage, and release sign-off criteria for clients in Norway, Canada, and the USA.
- Maintain Playwright-based E2E automation frameworks with Page Object Models, data-driven test layers, and cross-browser execution — integrated into GitHub Actions CI/CD pipelines and reducing regression cycles by up to 60%.
- Pioneer AI-driven QA workflows using AI for test case ideation and root cause analysis, GitHub Copilot for automation script generation, and MCP server integration with Azure Boards — significantly reducing manual QA overhead across sprints.
- Successfully led QA and delivered 3 production releases for a Norway-based client — coordinating UAT, client sign-off, and release readiness across cross-functional teams.
- Drive API and performance testing coverage using Postman, Swagger, k6, and JMeter — ensuring system stability and API contract integrity across high-load production environments.
- Mentor junior QA engineers through structured code reviews, test architecture guidance, and hands-on Playwright automation training — elevating team-wide quality standards.
- Support presales activities by demonstrating testing frameworks, automation maturity, and QA process capability to prospective international clients.

Software QA Engineer

January 2024 - December 2024 (1 year)

Dhaka, Bangladesh

Responsibilities:

- Develop and execute comprehensive test plans (manual and automated) based on project requirements.
- Communicate directly with clients and internal teams to ensure alignment and resolve issues.
- Participate in the requirement analysis phase and contribute to creating test cases that meet client expectations.
- Coordinate and support User Acceptance Testing (UAT), ensuring the product meets quality standards.

- Assist in preparing for client demos and provide quality-related insights during presentations.
- Support presales activities by demonstrating testing processes and automation capabilities.
- Take ownership of product quality, providing feedback on test coverage, risks, and overall product integrity.
- Implement performance testing(k6, JMeter) and continuously improve testing strategies..
- Perform API testing with Swagger and Postman.
- Conduct database testing using SQL and AWS DynamoDB.
- Perform IoT-based project testing using IoT Core, AppSync, and SQS tools.
- Handle multiple dynamic projects, managing each one on a one-to-one basis.
- Guide and mentor junior SQA engineers to enhance team capabilities

Associate Software QA Engineer

May 2022 - December 2023 (1 year 8 months)

Dhaka, Bangladesh

Project: RS Sjoliv

Responsibility:

- Testing RS app and web application
- Analyze Client requirement
- Prepare Test Data and Test plan
- Write test cases for different features
- Before testing R&D for test scenarios
- API Testing By (Postman and Swagger)
- Load testing by K6 and JMeter
- Bug Report on Azure Devops
- Regression and Sanity testing for every sprint
- Prepare different documents
- Backlog grooming
- Write automation script with Selenium
- Sprint planning
- Sprint review
- Retrospective

Trainee Software QA Engineer

January 2022 - April 2022 (4 months)

Dhaka, Bangladesh

Responsibility:

- Requirement Analysis

- Automation Learning and Implementation
- Load testing with JMeter on TEQ Projects
- API Testing with Postman Practice and Implementation

SEBPO

Trainee QA Engineer

November 2021 - December 2021 (2 months)

Bangladesh

- Analyze Client Requirements
- Check consistency across the browsers and operating systems.
- Report QA-related issues to the developer.
- Testing creative banners and ads
- Prepare Test Data and Test plan

Education

International Islamic University Chittagong

Bachelor's degree, Computer Science & Engineering · (August 2016 - December 2020)

Feni Government College

HSC, Science · (May 2015)

Al helal Academy

SSC, Science · (May 2013)

Learning & Earning Development Project - LEDP

Digital Marketing · (November 2020)
